João Vitor Cavalcanti da Silva

Senior Software Engineer | Node.js & TypeScript | React, Next.js, PostgreSQL, AWS

Recife, Pernambuco — Brazil · Open to remote · UTC−3, overlaps US Eastern hours · joaovitorrkc@gmail.com · +55 (81) 98212-0328 · linkedin.com/in/joaovitorkc · github.com/joaovitorkc · joaovitorkc.com.br

SUMMARY

Senior software engineer. Since 2023, shipping production systems for Brazilian public healthcare: the product, the data pipelines and the Linux servers they run on. TypeScript, Node.js, React, Next.js and PostgreSQL. The reporting platform is in daily use across 400+ municipalities, with 10k+ monthly active users. Looking for senior backend, infrastructure or full-stack roles on distributed teams, remote, as a contractor or full-time.

EXPERIENCE

Founder & Senior Software Engineer · Apr 2026 — present

Quiral Labs · Self-employed · Recife, Brazil · Remote

Engineering studio. Infrastructure and backend contracts for software companies.

- Cut a healthcare client’s hosting cost by about US$72k a year, moving 300+ municipal servers onto VPSs about 10x cheaper per machine, with all traffic through WireGuard tunnels.
- Kept that 300+ server fleet reachable: a dropped tunnel comes back within seconds, backed by a control plane with inventory, Ansible provisioning and a health agent on every host.
- Made every municipal database restorable from the last 3 days or the last 3 months, with automated multipart backups to S3-compatible storage.
- Doubled the speed of the nightly sync that loads millions of rows per municipality from 300+ remote databases into one PostgreSQL warehouse, using Node.js streams and Bull/Redis queues.

Skills: TypeScript, Node.js, Next.js, Fastify, PostgreSQL, Redis, BullMQ, Ansible, WireGuard, Nginx, AWS S3, Bash

Senior Software Engineer · Apr 2023 — present

Wi Consultoria · Contract · Recife, Brazil · Remote

Management software for municipal health departments in Brazil’s public health system.

- Built the primary-care reporting platform used in 400+ municipalities (10k+ monthly active users): one tenant per city, PDF and CSV exports, and real-time patient call screens. Next.js, React, Express, Knex, PostgreSQL, Socket.IO.
- Showed health departments which features their teams actually use (usage ranking, cohorts, deep-link conversion) and reached those teams with automated WhatsApp campaigns on Bull/Redis queues.
- Grew organic search clicks 47x (+4,648%) and impressions 7x (+592%) in three months on the public site, with server-side rendering, JSON-LD and a sitemap.
- Kept production up through deploys: nginx canary across two app servers (PM2), leader-locked workers, and jobs that recover stuck syncs.
- Set up the engineering workflow across 15+ repositories so changes from coding agents land only after the tests pass.

Skills: TypeScript, Node.js, Next.js, React, Express, PostgreSQL, Knex, Bull, Redis, Socket.IO, Nginx, PM2

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Bash

Interface: React, Next.js, Tailwind CSS

Server: Node.js, Express, Fastify, Knex, Bull, REST, WebSocket

Data: PostgreSQL, Redis

Infra: Linux, Nginx, PM2, Ansible, WireGuard, Amazon Web Services (AWS) S3, Git, CI/CD

EDUCATION

Computer Science · Jan 2025 — present

UniFavip Wyden

Bachelor's degree in Computer Science, in progress.

CERTIFICATIONS

2025 Cloud Architecting — AWS Academy

2025 Cloud Foundations — AWS Academy

2025 Cyber Threat Management — Cisco

2025 1st place (team) — AWS Hackathon Nordeste
